Th MAILING DATE of this communication appears on the cover sheet with the correspond nc address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status							
1)⊠	Responsive to communication(s) filed	on <u>03 June 2003</u> .					
2a)□	This action is FINAL . 2b)	☐ This action is r	on-final.				
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.

Art Unit: 2875

DETAILED ACTION

Response to Amendment

Claim Objections

1. A claim 1 is objected to because of the following informalities: In claim 1, lines 8-9 "the outer edge" lacks a positive antecedent basis. Appropriate correction is required.

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Jiao et al. Jiao et al discloses a light source 8 and optical reflector 20 adjacent to the light source for producing a beam which is generally spread widthwise with respect to the axis of the road, wherein the said optical reflector 20 has a continuous reflective surface

Art Unit: 2875

that creates in said beam at least two distinct zones (see figure 3) of maximum light intensities, wherein said optical reflector has a central axis passing through the light source in the beam direction, and is asymmetrical along a plane on the central axis so said distinct zones have different angular offsets with at least one distinct zone located on the outer edge of the reflective surface (see figure 3, where Jiao et al shows the maximum intensities are on two of the outer edges of the reflective surface (40.9 Lumen on the outer edges in the Y-direction of the reflector between –45mm to –15mm and 45mm to 15mm).

Response to Arguments

1. Applicant's arguments filed on 06/03/2004 have been fully considered but they are not persuasive in view of the Jiao et al. The examiner agrees with the applicant that Staiger et al doesn't specifically teach the limitation of "said distinct zones have different angular offsets with at least one distinct zone located on the outer edge of the reflective surface."

However, the examiner doesn't agree with applicant's argument that Jiao et al fails to disclose two distinct zones of maximum light intensities. As broadly claimed, the reflector has two outer edges, each in the X and Y direction. Therefore, Jiao et al has two distinct zones which have different angular offsets with at least one distinct zone located on the outer edge of the reflective surface (see figure 3, where Jiao et al shows the maximum intensities are on two of the outer edges of the reflective surface

Art Unit: 2875

(40.9 Lumen on the outer edges in the Y-direction of the reflector between —45mm to – 15mm and 45mm to 15mm).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas M Sember whose telephone number is 571-272-2381. The examiner can normally be reached on M-F 8 A.M- 5.30 p.m. first Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on 703-571-272-2378. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
